1. A glider field was constructed by the Germans during the war immediately east of the city of Inowroclaw (N 52-48, E 18-16), between Inowroclaw and the village of Bolkow (N 52-48, E 18-19). A hangar, which held 12 gliders for a number of years, is located on the airfield. A school for training glider instructors and probably officer candidates for the Air Force is also located on the field. The training which begins in April and ends in September is handled by some 20 instructors who wear Polish Air Force uniforms. The gliders are towed by propeller-driven planes from the military airfield. 25X1
2. The Germans constructed a well-equipped military airfield during the war about 4 kilometers northeast of Inowroclaw on the estate of Latkowo (N 52-50, E 18-18). When the Germans retreated, the field was badly damaged and all the buildings were razed. Clearing work was begun on the airfield in 1949 and reconstruction of buildings took place during 1951-1954.
3. The military airfield measures 1.8 kilometers by 2 kilometers and has two concrete runways which cross each other. The runways are nearly 2 kilometers in length and at the most 40 meters in width. Two hangars are located at the northern part of the field near the village of Latkowo. Some new buildings and rebuilt houses belonging to the estate and village of Latkowo have been turned into a barracks for a Polish Air Force regiment which is stationed on the airfield. The regiment has about 40 propeller-driven planes at its disposal. During the summer, however, this number is often doubled. In the summer there are occasionally jet planes bearing Soviet or Polish markings on the field. 25X1
